Telematics Technical description

Asset Security introduces unique Telematics System with the following:

1. **Automated Actions:**

Vehicles follow preset rules with preset actions to be activated automatically upon violation.

2. **Anti – Theft:**

Agile Anti-theft system that allows a full control over the vehicle where the vehicle can't be operated except in allowed hours and allowed geographical areas.

N.B: Immobilizing is activating by cutting off Fuel, Starter and power.

3. **Anti – Hijacking:**

A smart “Panic” button allows a Hi-jacked victim to press on it right before leaving the Vehicle. This button triggers the “Delayed Arrest” which starts arresting the vehicle gradually and safely after a system preset time.

N.B: Arresting takes place while keeping the motor running ensuring the steering wheel and the braking systems are fully functional. Accordingly the vehicle stops safely protecting itself and the cargo.
